

**Amendments to the Claims:**

The following listing of claims will replace all prior versions, and listings, of claims in the application:

1. (Currently Amended) A plasma injector for injecting a reducing agent,  
wherein said plasma injector comprises a injection nozzle and a plasma generator which generates a plasma in the vicinity of a injection port at the distal end portion of said injection nozzle; ~~and~~  
wherein said plasma injector injects a reducing agent in a liquid droplet state, and at least partially converts the reducing agent injected in a liquid droplet state into a plasma to vaporize the reducing ~~agent~~ agent; and  
wherein said plasma generator is located on the distal end portion of said injecting nozzle.
2. (Canceled)
3. (Currently Amended) The plasma injector according to ~~claim 2~~, claim 1, wherein said plasma is an inductive-coupling plasma; wherein said plasma generator located at the distal end portion of said injection nozzle comprises a cup-shaped member surrounding the injection port of said injection nozzle, and an inductive-coil surrounding around said cup-shaped member; and wherein said cup-shaped member is made of an electromagnetic wave-transmissive material.
4. (Currently Amended) The plasma injector according to ~~claim 2~~, claim 1, wherein the plasma is an electric-discharge plasma; wherein said plasma generator located at the distal end portion of the injection nozzle comprises a cup-shaped member surrounding the injection port of said injection nozzle; wherein said cup-shaped member is made of an electrically semiconductive material or an electrically conductive material; and wherein said

cup-shaped member and said distal end portion of the nozzle are electrically insulated from each other to form an electrode couple together.

5. (Previously Presented) The plasma injector according to claim 1, wherein the plasma is an electric-discharge plasma, a microwave plasma or an inductive-coupling plasma.

6. (Previously Presented) An exhaust gas purifying system, wherein a reducing agent is injected upstream of a catalyst located in an exhaust pipe; and wherein said reducing agent is injected by said plasma injector according to claim 1.

7. (Original) The exhaust gas purifying system according to claim 6, wherein said catalyst is a NO<sub>x</sub> purifying catalyst.

8-11. (Canceled)

12. (Previously Presented) An exhaust gas purifying system, wherein a reducing agent is injected upstream of a catalyst located in an exhaust pipe; and wherein said reducing agent is injected by said plasma injector according to claim 3.

13. (Previously Presented) An exhaust gas purifying system, wherein a reducing agent is injected upstream of a catalyst located in an exhaust pipe; and wherein said reducing agent is injected by said plasma injector according to claim 4.

14. (Previously Presented) An exhaust gas purifying system, wherein a reducing agent is injected upstream of a catalyst located in an exhaust pipe; and wherein said reducing agent is injected by said plasma injector according to claim 5.

15-16. (Canceled)

17. (Previously Presented) The exhaust gas purifying system according to claim 12, wherein said catalyst is a NO<sub>x</sub> purifying catalyst.

18. (Previously Presented) The exhaust gas purifying system according to claim 13, wherein said catalyst is a NO<sub>x</sub> purifying catalyst.

19. (Previously Presented) The exhaust gas purifying system according to claim 14, wherein said catalyst is a NO<sub>x</sub> purifying catalyst.
20. (Canceled)
21. (New) The plasma injector according to claim 1, wherein the plasma is in a region within 5 cm from the injection port.
22. (New) The exhaust gas purifying system according to claim 6, wherein plasma is generated only at the moment of injecting the reducing agent under a condition that the system is not sufficiently warmed up.
